Application No.

Continuation of 5. does NOT place the application in condition for allowance because: the applicant claims the moving load can be either of both a tensile load and a compression load. Wild et al ('094) and Pennells ('429) broadly teaches a moving load (via piston and cylinder assembly) acting on the measuring beam (67) is subjected to both compression and tensile forces (Column 1, lines 45-48 & line 64-Column 2, line 1); in combination, the references reads on the claimed limitation.
